Go to: https://www.culturediff.org/english/clientareatest1.php

Put in your email address

Use password- softtests

When logged in click on ‘the dates of heliacal rising and setting of the star of Sirius in 2025 AD’

In the table leave the year as 2025. Find your latitude for your city/town and input it in decimal degrees- i.e. Asheville is 35.595 North so i would put 35.595

If you are in the southern hemisphere but your degrees in negative- i.e. Cape Town South Africa is 33.922 South- so it would be -33.922

Put in your altitude- this is a big deal here in Asheville as we are surrounded by Blue Ridge Mountains

For me to see Heliacal Rise here it is best if I go up to the peak of a mountain and use that as my altitude

(You can google for this information)

If you know visual acuity add it but if not leave what is there

Leave Sirius as the star

Click ‘submit’

Rise here in Asheville is 8/12

In Cape Town there is no set and rise- Sirius is visible all year (Heliacal Rise is mainly a Northern Hemisphere Phenomena)

Rise/set of Sirius occurs from latitudes 70 degrees to -20 degrees
